

## Grey Kitty® Lawn Care Program

<b>Late March/April</b>	Apply pre-emergent to prevent weed germination. Do not apply if over-seeding.
	Apply Granular Revive to benefit from spring moisture.
<b>April/May</b>	Core aerate and apply Natural Guard® Granular Humate; Top dress with ¼" compost or EKO Lawn Top Dressing; Seed or sod if necessary.
<b>May</b>	Apply a slow-release fertilizer. Water-in.
<b>June</b>	Apply a slow-release fertilizer. Water-in.
<b>July/August</b>	Apply Revive® for heat stress and improved water penetration
<b>September</b>	Core aerate and apply Natural Guard® Granular Humate; Top dress with ¼" compost or EKO Lawn Top Dressing; Seed or sod if necessary.
<b>Oct/November</b>	Apply a slow-release <b>Winterizer</b> , water-in.

**Slow-Release Fertilizers:** Richlawn **Pro-Rich**, Richlawn **Organic 100** and **Colorado's Own Lawn Food Revive®** improves water penetration, adds nutrients, and promotes greener turf. Apply any time during growing season if needed; Available in both granular and liquid forms.

**Richlawn® Iron-Rich** helps lawns that are healthy, but are pale green; only apply once during growing season.

**F-Stop** is a fungicide that is helpful for several common lawn diseases. It should be applied (if needed) several times in spring to **prevent** fungal disease; later application will help disease from spreading.

**EKO Lawn Top Dressing** can be applied ¼" thick to thinning and stressed turf areas. This sifted compost will enrich soil, promote root growth, and improve turf health.

**Natural Guard Granular Humate** can be applied anytime to improve soil quality.

### **\*\*Helpful Hints:**

- Read all instructions on package labels before applying; over-applying or mixing incorrectly can cause damage.
- Don't fertilize too close to seeding; only after 2<sup>nd</sup> mowing can seedlings handle fertilizer.
- If weeds occur, remove manually or spot spray with an herbicide; apply in the evening when temperature is between 65 and 85 with no wind.
- Mow grass 3" tall to block weeds, grow deeper roots, and retain water.
- Water 1 ½" per week (broken into 3- ½" morning cycles). Increase up to 2-3" during hottest part of the summer. **Never water an established lawn more than every 2<sup>nd</sup> day; Adjust according to rainfall and temperature.**
